In the Wild

Animals have lived in the wild for many millions of years. They have different ways of feeding, behaving, and living together.

Scientists and different animal experts learn about wild animals by watching them in their habitats.

How many more gazelles are there than elephants?

Animal experts sometimes help protect wild animals in danger, or help those that have been hurt.

- how many left?
- how many more?
- half

These baby animals were left alone after hunters came. If half of them are put back into the wild, how many will be left?

This book explores different ways people learn about and help animals in the wild.
