What patterns
can you see?

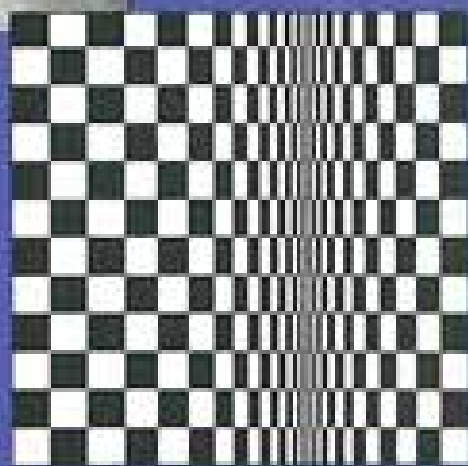

Tricking Your Eyes

- Sometimes what you see is not what you think you see. You look at something and see something different than what is there.

This picture looks as if the paper is wavy...

...and this one looks as if it curves. Can you make it curve out and then in?

(Bridget Riley)

- Many things can trick your eyes:
 - the color of something
 - where it is
 - what is around it
 - what you think you are going to see.
