Can You See Green?

This book is about the color green.
Can you see the color green?

Can you see the number in the square below? If not, you may have red-green **color blindness**.

Many people who have red-green color blindness can see more at night than other people. They can also see more shades of some colors than other people.

Is Green a Primary color?

Primary colors can be mixed together to make all the other colors. You cannot make a primary color by mixing other colors.

When you mix paint, the primary colors are:

- ▶ red,
- ▶ yellow,
- ▶ blue.

In paint, green is made up of yellow and blue, so green is not a primary color.

When you mix light, though, the primary colors are:

- ▶ red,
- ▶ blue,
- ▶ green.

In light, yellow is made up of green and red, so green is a primary color.
